JOURNAL OF THE IRON AND STEEL INSTITUTE

VOLUME 177 1954

SUBJECT INDEX

[References to papers and articles given in full text are indicated by the word (*Paper*) following the page number.

Indexing of Alloy Steels and Other Alloys: In the indexing of alloy steels, carbon and iron are ignored and the alloying elements contained in the steel are arranged in alphabetical order; for example, all references to nickel–chromium–molybdenum steel will be found under the heading chromium–molybdenum–nickel steel. In the indexing of other alloys, carbon and iron, when present, are included in the title; iron, when present, is always mentioned first and the other elements follow in alphabetical order, carbon being in all cases mentioned last. Examples: "Iron–silicon–carbon alloys" and "iron–chromium–nickel–carbon alloys."]

Abrasives, diamond, review, 375; industry 278; steel shot, 277; vapour-blast, 473; vapour-blast, in lapping, 473

Acetylene, piping of, 375; production, 473

Adhesion, of Cr–Ni layers, 474; ground coats on sheet iron, effect of plating 475

Africa, iron-ore deposits, 357

Ageing, effect on impact strength, 281; effect on mechanical properties, 479; strain, effect on mild-steel yield-point, 377; strain, of mild-steel strip after temper rolling, 209 (*Paper*); strain, transition temperatures of Ti-stabilized mild steels, 479

Air, pollution control, 363

Aircraft Parts, gears case-hardening for helicopters, 272; gears nitriding for helicopters, 468; propeller-blade drawing, 372; propeller-brazing inspection by photography, 277; spar hardening for helicopters, 272; tubes heat-treatment, 467

Aircraft Steel, Cr–Mo–Ni, 379; corrosion by PbBr in exhausts, 290; precipitation-hardening type, 287

Algeria, iron-ore deposits, 357

Allegheny Ludlum Steel Corp., continuous casting of stainless steel, 266; development, 366

Allis-Chalmers Manufacturing Co., precision green-sand casting, 270

Alloy Steel, austenite anisothermal decomposition in, 305 (*Paper*); austenite isothermal transformation and elements distribution, 483; centrifugal casting, 269; in chemical engineering, 286, 287; corrosion, 381; effects of elements, 379; fabrication techniques, 469; forgings annealing, 371; hardenability relationships, 479; for heat-treatment equipment, 370, 476; Mo-containing, 286; production economics, 462; quenching study, 286; spectrography, 384; tempering processes, 445 (*Paper*)

Alloys, aluminium–nickel oxidation, 484; chromium – cobalt – nickel TiC-based, 477; Cr–Mo–Ni study, 284; cobalt–tungsten powder, 478; iron–aluminium–chromium heat resistance, 378; iron–carbon, effects of carbon and grain-size, 286; iron–carbon, heat-treatment, 371; iron–carbon high-purity, tensile and impact properties 331 (*Discussion*); iron–carbon, spectra

Alloys—*continued*
in transformation, 383; iron–chromium, determination of Cr, 383; iron–chromium heat resistance, 378; iron–chromium tensile and impact properties, 93 (*Paper*); iron–chromium–nickel, effect of cold work on γ-α transformation, 406 (*Paper*); iron–copper precipitation processes, 483; iron–copper–molybdenum–nickel, effect of annealing on magnetic properties, 377; iron–manganese, effect of cold work, 288; iron–manganese–carbon high-purity, tensile and impact properties, 331 (*Discussion*); iron–molybdenum tensile and impact properties, 93 (*Paper*); iron–nickel, Fe self-diffusion in, 290, 483; iron–nickel, magnetic properties, 282; iron–nickel tensile and impact properties, 93 (*Paper*); iron–nickel–carbon, iron self-diffusion in, 483; iron–nitrogen, effect of heat-treatment on brittleness, 110 (*Paper*); iron–oxygen intergranular brittleness, 334 (*Discussion*); iron–silicon exchange reactions, 290; iron–silicon tensile and impact properties, 93 (*Paper*); iron–silicon–carbon graphitization kinetics, 449 (*Correspondence*); nickel–carbon crystallization, 483; tin–zinc electrodeposition, 476

Alumina, oxygen removal from in vacuum furnace, 485

Aluminium, addition to manganese steels, 379; bonding by Al–Fin process, 268; coatings, effect on steel heat resistance, 279; coloured-micrographs study, 380; competition with steel 385; corrosion with Cr–Ni steel in HNO_3, 380; creep at high temperatures, 481; determination in steel by polarography, 292; determination in steel by spectrometry, 484; effects on acid Bessemer steels, 379; effects in graphitization, 287; hot coating of steel wire, 476; hot-dip coating by, 279; impact-extrusion dies, 372; vinyl-resin bonding on, 279

Aluminium Alloys, in chemical engineering, 287; coatings, 279

Aluminium Ferrite, properties, 378

Aluminium–Nickel Alloys, oxidation, 484

Aluminium Nitride, determination in iron and steel, 291

American Alloy Casting Institute, alloy castings for heat-treatment plant, 467

American Electroplating Society, plating-bath analysis, 384

American Foundrymen's Association, foundry-safety manual, 271; sand-testing standards, 268

American Iron and Steel Institute, coke-testing recommendations, 363; stainless steels, 287

American National Tube Co., cylindrical-chamber reheating furnace, 271

American Wire Fabrics Corp., Mount Wolf plant, 265

Analysis, 291, 381, 484; colorimetric determination of aluminium in steel, 484; colorimetric determination of boron, 485; electrolytic determination of carbides in steel, 484; ion-exchange, of phosphating baths, 384; metallurgical, 387 (*Book*); photometric, of steel, 383; polarographic A.C. circuit, 485; polarographic determination of aluminium, 292; polarographic determination of clay in sands, 268; polarographic determination of iron, 292; polarographic determination of vanadium, 485; polarographic direct-reading, 291; polarographic, effect of corrosion inhibitors on maxima, 290; polarographic, in plating-bath study, 474; spectrochemical colloquium, 383; spectrochemical direct reader, 381; spectrographic, alloys-spectra anomalies, 483; spectrographic apparatus, 383; spectrographic, in carbon-distribution study, 272; spectrographic, of cast irons, 383, 384; spectrographic, charcoal electrodes for, 382; spectrographic, concave-cathode lamp, 383; spectrographic determination of carbon, 382; spectrographic determination of Cr in Fe–Cr, 383; spectrographic determination of Mo, Si, and V, 382; spectrographic determination of silicon, 291, 384; spectrographic direct reader, 382, 383, 384; spectrographic, electronic system, 382; spectrographic generators, 382; spectrographic gratings and prisms, 384; spectrographic, Hilger instrument, 384; spectrographic-image converter, 383; spectrographic, integrated-intensity calculation, 485; spectrographic instrument, 383; spectrographic intensity-lines evaluation, 382; spectrographic, of iron and steel 381; spectrographic, of irons and

Analysis—*continued*
slags, 383; spectrographic, of low-alloy steels, 384; spectrographic, low-pressure sparks, 384; spectrographic methods for steels, 382; spectrographic near infra-red instrument, 383; spectrographic, nomograph for, 383, 384; spectrographic optical systems, 382; spectrographic, photographic emulsions, 382; spectrographic quantometer, 291; spectrographic quantometric, 384; spectrographic quantometric, error sources, 384; spectrographic quantometry, 384; spectrographic Raman, photographic materials, 382; spectrographic Raman, source for, 382; spectrographic rust study, 383; spectrographic, samples obtaining by drilling, 484; spectrographic, solution method, 400 (*Paper*); spectrographic, sources development, 383; spectrographic, Zr-arc source, 383; spectrometric, 383; spectrometric, cathode-ray indicator, 382; spectrometric determination of phosphorus in steel, 484; spectrometric, of flames, 382; spectrometric mass instrument, 382; spectrometric recording microphotometer, 384; spectroscopic, 383; spectroscopic, electrode effects in, 291; spectroscopic, with high-frequency spark, 291; spectroscopic mass methods, 291; steel-industry, 390 (*Book*)

Analysis of, cast iron, 291; cast iron by spectrography, 383, 384; chromized layers by spectrography, 383; coal tars, 362; electroplating baths, 384; gas by gravimetric method, 175 (*Paper*); high-purity iron, 484; iron and steel, 291; irons by spectrography, 383, 384; pig iron, 291; steel, 390 (*Book*); steel by photometry, 383

Angola, iron-ore deposits, 357

Annealing, continuous, of tinplate, 371; effect on magnetic properties of Fe–Cu–Mo–Ni alloys, 377; electric, of white iron, 465; forgings, 371; malleable iron, 465; pot-castings finish, 465

Annealing Furnaces, bell-type, for strip 371; electric, 465; electric, for malleable iron, 267; for low-grade fuels, 468; for steel castings, 468

Appleby-Frodingham Steel Co., blast-furnace practice, 264; sinter constitution, 316 (*Paper*)

Arc Furnaces. *See* Electric Furnaces

Arc Welding. *See* Welding

Argentine, iron-ore deposits, 357

Armour Plate, casting, 466

Arsenic, determination in sinter, 485

Atlas Steels, Ltd., continuous-casting plant 463

Audley Engineering Co., Ltd., valve production, 369

Austenite, anisothermal decomposition in a medium-alloy steel, 305 (*Paper*); bond-energy determination, 289; diffusion of boron in, 290; martensite transformation mechanism, 289; retention, effect of cold-treatment, 289; structure, effect on iron self-diffusion, 483

Australia, Fifth Empire Mining and Metallurgical Congress, 292 (*Book*); iron ore of Cockatoo Island; iron and steel industry, 359; Leigh Creek coalfield, 358

Austria, iron-ore deposits, 358; iron-ore mining, 261

Automobile Industry, press for, 372

Automobile Parts, body-stamping plant, 273; brake drums from cast iron, 482; camshaft flame hardening, 468; crankshaft failures, 377; crankshaft forging, 469; crankshaft shell moulding, 370; crankshaft testing by ultrasonics, 283; cylinder-liner wear, 480; engine-sleeve moulding, 466; engine wear-resistance

Automobile Parts—*continued*
increasing by sulphurization, 480; engine-wear study by radio-isotopes, 282; gear-box heat-treatment and assembly, 371; gears, etc., flame-hardening machines, 468; gears and pinions carburizing, 468; piston rings from nodular iron, 466; wheel-rim rolling-pass design, 373

Avco Manufacturing Corp., channels cold forming, 372

B.S.A. Co. Ltd., lost-wax precision casting, 270

Bauxite, as fluorspar substitute in open-hearth, 368

Bearings, ball, steel heat-treatment, 288; design and failures, 276; lubrication by air, 471; lubrication review, 276; lubrication by sprayed colloidal graphite, 276; non-metallic, lubrication, 471; plastic, in rolling mills, 274; tungsten carbide, 276

Belgium, foundry productivity, 464, 466; iron ores, 358; research at I.R.S.I.A., 285; ultrasonic testing of welds, 480

Bend Tests, ductilometer type, 478; moment/radius relationship in sheet, 478; notched, for brittle fracture, 334 (*Discussion*)

Bentonite, in foundry, 465; Hungarian, electron-microscope study, 365; moulding-sand bonding by, 465

Benzole, washing by Uffer process, 363

Bessemer Converter. *See* Converters

Bessemer Process, basic, at Domnarfvets, 461; oxygen-enriched air in, 367; oxygen and oxygen/steam blowing, 462; oxygen in surface blowing, 462; research, 366; side-blowing, 268

Bessemer Steel, acid, effects of aluminium, 379; basic, arc-weld strength, 471; basic pearlite-free, fabrication and properties, 118 (*Paper*); deoxidation, 367; dephosphorization by carbonates, 367; nitrogen-content relationship with slag basicity, 366; properties for welded structures, 286; rail rolling, 373

Bethlehem Steel Co., large-forgings production, 273

Biographies, to face 200, 296, 392; contributors to *Journal*, 196, 257, 354; Swedish metallurgists, 194

Blast-Furnace, 263, 365, 460; carbon-lined, at Gary, 264; charging by conveyor belts at S.A. John Cockerill, 451 (*Discussion*); history at Shotts Iron Co., 487 (*Book*); low-shaft, 264; new, at Detroit Steel Co., 460; relining in 20 days, 264; tuyere materials other than copper, 365

Blast-Furnace Coke, chemical additions to before charging, 460; from Hokkaido coal, 363; properties and tests, 363

Blast-Furnace Gas, cleaning by Cottrell precipitators, 363; dust analysis and control, 363; dust meter, 366, 461; ferromanganese, cleaning plant, 363; gas-turbine possibilities, 374

Blast-Furnace Plant, at Colorado Fuel and Iron Corp., 264; conveyor-belt charging at S.A. John Cockerill, 451 (*Discussion*); flue-dust thickeners, 461; recuperators, 263; at Skinningrove, 264

Blast-Furnace Practice, 263, 365, 460; at Appleby-Frodingham, 264; charging by belt at S.A. John Cockerill, 451 (*Discussion*); chemical additions to coke, 460; conference, 456; effect of blast temperature on pig-iron nitrogen content, 366; with Japanese bog ores, 365; ore preparation, 294 (*Book*); recording of data, 264; with Ti-containing ores, 365

Blast-Furnace Process, coke consumption in remelting, 366; combustion-zone size and shape formula, 461; heat requirements, 460; iron temperature losses, 367; ore disintegration, 460

Blast-Furnace Slag, in cement manufacture, 265; determination of lime in, 485; determination of silica in, 243 (*Paper*); granulation effect on properties, 264; manganese as desulphurizing-power index, 264; optimum composition from liquidus data, 461
